EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Yukiko Iwata on 6-1-2004.

The application has been amended as follows:

In claim 15, delete the last 2 lines and replace them with:

--4) maintaining the flow rate of the liquefied natural gas at its dependent set point of step 3.--.

In claim 16 line 4, delete "first and second".

In line 6 of claim 16 change "the first" to --one of the--.

In line 7 of claim 16 change "the first" to --said--.

In the last two lines of claim 16 change "the second heat exchanger to the flow rate that refrigerant supplied to the second heat exchanger" to --the other heat exchanger to the flow rate of that refrigerant as supplied to said other heat exchanger--.

Change claim 17 to read as follows:

17. (Currently amended) [The method according to claim 15, wherein steps 2), 3) and 4) comprise]

A method of controlling the production of a liquefied natural gas product stream obtained by removing heat from natural gas in two parallel heat exchangers, wherein in

each of the heat exchangers the natural gas is in indirect heat exchange with expanded heavy mixed refrigerant and expanded light mixed refrigerant,

wherein the liquefied gas from the two heat exchangers is combined to form the liquefied natural gas product stream, wherein the flow rates of the refrigerants supplied to each of the heat exchangers and the temperature and the flow rate of the liquefied natural gas product stream are controlled by a method comprising the steps of:

a) measuring the temperature and the flow rate of the liquefied natural gas product stream and measuring the flow rates of the heavy mixed refrigerant and of the light mixed refrigerant;

b) selecting the flow rate of one of the refrigerants (the heavy mixed refrigerant, the light mixed refrigerant or the total mixed refrigerant) to have an operator manipulated set point, and generating a first output signal for adjusting the flow rate of the heavy mixed refrigerant and a second output signal for adjusting the flow rate of the light mixed refrigerant using (i) the operator manipulated set point for the flow rate of the one of the refrigerants, (ii) the flow rates of the heavy and light mixed refrigerants and (iii) an operator manipulated set point for the ratio of the flow rate of the heavy mixed refrigerant to the flow rate of the light mixed refrigerant;

c) adjusting the flow rates of the heavy mixed refrigerant and the light mixed refrigerant in accordance with the first and second output signals;

d) determining a dependent set point for the ratio of the flow rate of the liquefied natural gas product stream to the flow rate of one of the refrigerants such that the temperature of the liquefied natural gas product stream is maintained at an operator

manipulated set point. And determining a dependent set point for the flow rate of the liquefied natural gas product stream using (i) the dependent set point for the ratio of the flow rate of the liquefied natural gas product stream to the flow rate of the one of the refrigerants and (ii) the flow rate of the one of the refrigerants; and

e) maintaining the flow rate of the liquefied natural gas product stream at its dependent set point,

and wherein the flow rate of one of the refrigerants referred to in step d) is the sum of the flow rates of this refrigerant to the heat exchangers,

which method further comprises the steps of:

1) allowing the liquefied natural gas from each of the heat exchangers to pass through a conduit provided with a flow control valve, and measuring the two flow rates of the liquefied natural gas flowing through the conduits;

2) comparing the measured temperature of the liquefied natural gas from one of the heat exchangers to the temperature of the liquefied natural gas from the other heat exchanger;

3) determining the stream having the highest temperature, maintaining the flow rate of the liquefied natural gas stream having the lowest temperature at its operator manipulated set point; determining a dependent set point for the flow rate of the stream having the highest temperature, so as to decrease the temperature of that liquefied natural gas stream, and

4) maintaining the flow rate of the liquefied natural gas at its dependent set point of step 3.
